Fund overview

ISIN LU0325074259
Bloomberg JPHUSUA LX
Cusip L5783A528

Investment objective: To provide long term capital growth by having exposure primarily to US companies, using financial derivative instruments where appropriate.

Investor profile: This is an actively managed equity Sub-Fund offering exposure to US equities. The Sub-Fund uses an investment process that is based upon a strategy that seeks to exploit small market inefficiencies. Therefore the Sub-Fund may be suitable for investors looking for a higher risk equity strategy to complement an existing core portfolio, or who are looking to enhance potential long-term returns but are also comfortable with the extra risk inherent in the Sub-Fund's investment strategy.

Fund manager(s) Alain Sunier	Fund assets USD 841.8m	Domicile Luxembourg

PERFORMANCE DISCLOSURES

Past performance is not a guide to current and future performance. The value of your investments and any income from them may fall as well as rise and you may not get back the full amount you invested.

Source: J.P. Morgan Asset Management. Share class performance is shown based on the NAV (net asset value) of the share class with income (gross) reinvested including actual ongoing charges excluding any entry and exit fees.

Indices do not include fees or operating expenses and you cannot invest in them.

See the material risks, general disclosures and definitions on page 2.

Holdings

Key risks

The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions. The single market in which the Sub-Fund invests may be subject to particular political and economic risks, and as a result, the Sub-Fund may be more volatile than more broadly diversified funds. Where the Sub-Fund gains exposure to equity securities through the use of financial derivative instruments, the Sub-Fund may not benefit from the returns arising from its investments in cash, cash equivalents and short-dated instruments as these investments will serve primarily as collateral for

financial derivative instruments (principally swaps). The investment process seeks to exploit market inefficiencies. Since these market inefficiencies are small, individual transactions generally have a small expected return. Consequently, the investment process involves efficiently executing a large number of trades, diversified across many different equities. The Sub-Fund uses financial derivative instruments for investment purposes. The value of financial derivative instruments can be volatile and may result in gains or losses in excess of the amount required initially to establish a position in the derivative. The Management Company is required to disclose in Appendix III of the Prospectus the sum of

the gross notional exposure of the financial derivative instruments used (including those used for hedging or efficient portfolio management) as the expected level of leverage. However, this figure does not take into account whether the instrument increases or decreases investment risk and so may not be representative of the overall level of investment risk in the Sub-Fund. Movements in currency exchange rates can adversely affect the return of your investment. The currency hedging that may be used to minimise the effect of currency fluctuations may not always be successful.

GENERAL DISCLOSURES

Before investing, obtain and review the current prospectus, Key Investor Information Document (KIID) and any applicable local offering document. These documents, as well as the annual and semi-annual reports and the articles of incorporation, are available free from your financial adviser, your J.P. Morgan Asset Management regional contact, the fund's issuer (see below) or at www.jpnam.lu.

This material should not be considered as advice or an investment recommendation. Fund holdings and performance are likely to have changed since the report date. No provider of information presented here, including index and ratings information, is liable for damages or losses of any type arising from use of their information. Information from communications with you will be recorded, monitored, collected, stored and processed consistent with our EMEA Privacy Policy available at www.jpnam.com/pages/privacy

Performance fee is 20% when the fund return exceeds the benchmark return. Please refer to the Fund's Prospectus for conditions on the application of the performance fees.

DEFINITIONS

Correlation measures the relationship between the movement of the fund and its benchmark. A correlation of 1.00 indicates that the fund perfectly matched its benchmark.

Alpha (%) a measure of excess return generated by a manager compared to the benchmark. An alpha of 1.00 indicates that a fund has

outperformed its benchmark by 1%.

Beta a measure of a fund's sensitivity to market movements (as represented by the fund's benchmark). A beta of 1.10 suggests the fund could perform 10% better than the benchmark in up markets and 10% worse in down markets, assuming all other factors remain constant.

Annualised volatility (%) an absolute measure of volatility and measures the extent to which returns vary up and down over a given period. High volatility means that the returns have been more variable over time. The measure is expressed as an annualised value.

Sharpe ratio measures the performance of an investment adjusting for the amount of risk taken (compared a risk-free investment). The higher the Sharpe ratio the better the returns compared to the risk taken.

Tracking error (%) measures how much a fund's returns deviate from those of the benchmark. The lower the number the closer the fund's historic performance has followed its benchmark.

Information ratio (IR) measures if a manager is outperforming or underperforming the benchmark and accounts for the risk taken to achieve the returns. A manager who outperforms a benchmark by 2% p.a. will have a higher IR than a manager with the same outperformance but who takes more risk.
