PERFORMANCE DISCLOSURES

Past performance is not a guide to current and future performance. The value of your investments and any income from them may fall as well as rise and you may not get back the full amount you invested.

Source: J.P.Morgan Asset Management. Share class performance shown is based on the quoted price of the share class, assumes any net income was reinvested, and includes ongoing charges but not any entry or exit fees. Indices do not include fees or operating expenses and you cannot invest in them.

The benchmark is for comparative purposes only unless specifically referenced in the Funds' Investment Objective and Policy.

The Yield reflects net distributions declared over the past 12 months as a percentage of the quoted price at the date shown. It does not include the Entry charge and investors may be subject to tax on their distributions. Where a portion of the fund's expenses are charged to capital this has the effect of increasing the distribution for the year and constraining the fund's capital performance to an equivalent extent.

On 01/03/07 a customised index was introduced in order to facilitate a comparison between the Fund's performance and that of the broader Natural Resources sector. Please note that the Fund should not be expected to look or perform similar to the index. Prior to 04/01/16 the benchmark was Euromoney Global Gold, Mining & Energy Index (Total Return Net).

See the material risks, general disclosures and definitions on page 2.

Synthetic risk and reward indicator Based on share class volatility for the past 5 years. See Key Investor Information Document (KIID) for details.

Key risks

The value of equity and equity-linked securities may fluctuate in response to the performance of individual companies and general market conditions.

Emerging markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency and greater financial risks. Emerging market currencies may be subject to volatile price

movements. Emerging market securities may also be subject to higher volatility and be more difficult to sell than non-emerging market securities.

The Fund invests in securities of smaller companies which may be more difficult to sell, more volatile and tend to carry greater financial risk than securities of larger companies. The Fund will be concentrated in natural resources companies and may be concentrated in one or more countries. As a result, the Fund may be more volatile than more broadly diversified funds.

The value of companies in which the Fund invests may be influenced by movements in commodity prices which can be very volatile.

This Fund is aggressively managed, which may result in higher volatility of the Fund's performance and bigger differences between the performance of the Fund and its benchmark. Movements in currency exchange rates can adversely affect the return of your investment.

GENERAL DISCLOSURES

Before investing, obtain and review the current Prospectus, Key Investor Information Document (KIID) and the Key Features Document/Terms & Conditions for this fund which are available from JPMorgan Asset Management (UK) Limited.

DEFINITIONS

NAV Net Asset Value of a fund's assets less its liabilities per Share.

Quoted Price The single price at which all client orders are executed.

Morningstar Analyst Rating™ Morningstar's forward looking fund rating.

FE Crown rating are quantitative ratings ranging from one to five designed to help investors identify funds which have displayed superior performance in terms of stockpicking, consistency and risk control.

FE Crown Fund Ratings are however purely quantitative and backward looking, and, as such, cannot offer any certainty about the future.

FE Trustnet crown rating as at 31 March 2019.
Rayner Spencer Mills rated fund rating as at 31 March 2019.

Uses both a qualitative and quantitative

assessment of the funds. The fund is simply rated or not.

Correlation measures the relationship between the movement of the fund and its benchmark. A correlation of 1.00 indicates that the fund perfectly matched its benchmark.

Alpha (%) a measure of excess return generated by a manager compared to the benchmark. An alpha of 1.00 indicates that a fund has outperformed its benchmark by 1%.

Beta a measure of a fund's sensitivity to market movements (as represented by the fund's benchmark). A beta of 1.10 suggests the fund could perform 10% better than the benchmark in up markets and 10% worse in down markets, assuming all other factors remain constant.

Annualised volatility (%) an absolute measure of volatility and measures the extent to which returns vary up and down over a given period. High volatility means that the returns have been more variable over time. The measure is expressed as an annualised value.

Sharpe ratio measures the performance of an investment adjusting for the amount of risk taken (compared a risk-free investment). The higher the Sharpe ratio the better the returns compared to the risk taken.

Tracking error (%) measures how much a fund's returns deviate from those of the benchmark. The lower the number the closer the fund's historic performance has followed its benchmark.

Information ratio (IR) measures if a manager is outperforming or underperforming the benchmark and accounts for the risk taken to achieve the returns. A manager who outperforms a benchmark by 2% p.a. will have a higher IR than a manager with the same outperformance but who takes more risk.
