

JPMorgan Chinese Investment Trust plc

Monthly Update as at 30 June 2018

Management Commentary

The trust outperformed the benchmark in May. Stock picks in healthcare were among the top contributors. Drug manufacturers Jiangsu Hengrui and CSPC contributed to performance, as the former received China Food and Drug Administration approvals for its oncology treatments and the latter rose on the back of strong first-quarter earnings. Select technology holdings, particularly online operators, also added value. Newly initiated holdings in online video platform iQiyi and online content platform Bilibili also rallied on good results. Stock selection in financials was more mixed but positive overall. Our position in independent wealth and asset manager Noah added value as shares continued to rally on little stock-specific newsflow. Meanwhile, banks retreated, given worries of increased bond defaults and further financial deleveraging. Not owning the large cap, index heavy banks, including China Construction Bank, ICBC and Bank of China, added value over the month. However, overweights in China Merchants Bank, ChongQing Rural Commercial Bank, Bank of Ningbo and Postal Savings Bank detracted. Our lack of exposure to energy also hurt performance in May, given continuous strength in the oil price.

JPMorgan Chinese Investment Trust plc

SECTOR BREAKDOWN AS AT 30 JUNE 2018 ⁶

The Trust is an actively managed portfolio, holdings, sector weights, allocations and leverage, as applicable are subject to change at the discretion of the Investment Manager without notice.

RISK INFORMATION

- Exchange rate changes may cause the value of underlying overseas investments to go down as well as up.
- Investments in emerging markets may involve a higher element of risk due to political and economic instability and underdeveloped markets and systems. Shares may also be traded less frequently than those on established markets. This means that there may be difficulty in both buying and selling shares and individual share prices may be subject to short-term price fluctuations.
- This fund may use derivatives for investment purposes or for efficient portfolio management.
- External factors may cause an entire asset class to decline in value. Prices and values of all shares or all bonds could decline at the same time, or fluctuate in response to the performance of individual companies and general market conditions.
- This trust may utilise gearing (borrowing) which will exaggerate market movements both up and down.
- This trust may also invest in smaller companies which may increase its risk profile.
- The share price may trade at a discount to the Net Asset Value of the company.
- The single market in which the Trust primarily invests, in this case China, may be subject to particular political and economic risks and, as a result, the trust may be more volatile than more broadly diversified trusts.
- The Trust may invest in China A-Shares through the Shanghai-Hong Kong Stock Connect program which is subject to regulatory change, quota limitations and also operational constraints which may result in increased counterparty risk.

EXPLANATORY NOTES

⁴© 2018 Morningstar. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.

⁵Prior to 01/02/16 the benchmark was MSCI Golden Dragon Index (€).

⁶NAV is the cum income only NAV with debt at par, diluted for treasury and/or subscription shares if applicable. Share price performance figures are calculated on a mid market basis in GBP with income reinvested on the ex-dividend date. The performance of the company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

⁷Prospective dividend yield is indicative and based on mid market prices, and include the declared and net prospective dividends for the current financial year.

⁸Gearing represents the excess amount above shareholders' funds of total investments (excluding liquidity fund holdings) expressed as a percentage of the shareholders' funds. If the amount calculated is negative, this is known as a "net cash" position.

⁹Ongoing charges are the management fee and all other operating expenses, excluding interest charges on any borrowing and any performance fee payable expressed as a percentage of the average daily net assets during the year. All figures are for the previous financial year.

¹⁰Non-Benchmark holdings (where held) are classified in the appropriate sector/region. Cash is net current assets and holdings used as cash substitutes if applicable.

IMPORTANT INFORMATION

This factsheet is to provide you summary information about the Company and should not be taken as an advice or recommendation to buy or sell its shares. If you are not sure of suitability of our products for your investment needs, please contact a financial adviser. Please ensure reading important product documentation including Key Features and Terms and Conditions, Investor Disclosure Document and Annual Reports and Accounts.

GLOSSARY OF TERMS

BENCHMARK COMPARISON - Comparison of the Company's performance is made with the benchmark. The benchmark is a recognised index of stocks which should not be taken as wholly representative of the Company's investment universe. The Company's investment strategy does not follow or track this index and therefore there may be a degree of divergence between its performance and that of the Company.

CASH - Net current assets including investment in liquidity funds & treasury stocks (if held) and drawn revolving credit facilities (if any) with an original maturity of less than 1 year.

DISCOUNT / PREMIUM - If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. If the share price of an investment company is higher than the net asset value (NAV) per share, the company is said to be trading at a premium. The discount/premium is shown as a percentage of the NAV.

GEARING - Gearing represents the excess amount above shareholders' funds of total assets expressed as a percentage of the shareholders' funds. Total assets include total investments and net current assets/liabilities less cash/cash equivalents and excluding bank loans of less than one year. If the amount calculated is negative this is known as a 'net cash' position.

SECTOR / GEOGRAPHICAL BREAKDOWNS - These are expressed as a percentage of total portfolio and cash. Investments in liquidity funds will be shown as cash.

TOP 10 HOLDINGS - These are expressed as a percentage of total portfolio and cash. Investments in liquidity funds / treasury stocks will not be shown in the top 10 holdings.
