Company overview

ISIN Sedol Bloomberg Reuters
GBOOBYMKY695 BYMKY69 JPCI LN JPG.L

Objective: To provide superior total returns and outperform the MSCI All Country World Index over the long-term by investing in companies based around the world. The Company makes quarterly distributions, that are set at the beginning of each financial year. On aggregate, the intention is to pay dividends totalling at least 4% of the NAV at the time of announcement. The manager is focused on building a high conviction portfolio of typically 50-90 stocks, drawing on an investment process underpinned by fundamental research. Portfolio construction is driven by bottom up stock selection rather than geographical or sector allocation. Currency exposure is predominantly hedged back towards the benchmark. The Company uses borrowing to gear the portfolio within a range of 5% cash to 20% geared under normal market conditions. The Company will repurchase its shares with the aim of maintaining an average discount of around 5% or less calculated with debt at par value.

Portfolio manager(s)	Share price	Actual gearing 2.6%
Helge Skibeli (2019)	326.0p	Company fees & expenses
Rajesh Tanna (2019)	NAV 320.3p	Ongoing Charges 0.56%

PERFORMANCE DISCLOSURES

Past performance is not a guide to current and future performance. The value of your investments and any income from them may fall as well as rise and you may not get back the full amount you invested.

Source: J.P. Morgan Asset Management/Morningstar. Net asset value performance data has been calculated on a NAV to NAV basis, including ongoing charges and any applicable fees, with any income reinvested, in GBP. NAV is the cum income NAV with debt at fair value, diluted for treasury and/or subscription shares if applicable, with any income reinvested. Share price performance figures are calculated on a mid market basis in GBP with income reinvested on the ex-dividend date. The performance of the company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance. Indices do not include fees or operating expenses and you cannot invest in them.

Prospective dividend yield is for the investment trust's current financial year. It is indicative only and based on the latest month end mid-market price and the declared and net prospective dividends for the current financial year. Prior to the 01/07/08 benchmark was the MSCI World Index (£).

See the material risks, general disclosures and definitions on pages 2 & 3.

Key risks

Exchange rate changes may cause the value of underlying overseas investments to go down as well as up.

Investments in emerging markets may involve a higher element of risk due to political and economic instability and underdeveloped markets and systems. Shares may also be traded less frequently than those on established markets. This means that there may be difficulty in both buying

and selling shares and individual share prices may be subject to short-term price fluctuations.

Where permitted, a Company may invest in other Investment Funds that utilise gearing (borrowing) which will exaggerate market movements both up and down.

This Company may use derivatives for investment purposes or for efficient portfolio management. External factors may cause an entire asset class to decline in value. Prices and values of all shares or all bonds could decline at the same time, or

fluctuate in response to the performance of individual companies and general market conditions.

This Company may utilise gearing (borrowing) which will exaggerate market movements both up and down.

This Company may also invest in smaller companies which may increase its risk profile. The share price may trade at a discount to the Net Asset Value of the Company.

GENERAL DISCLOSURES

Before investing, obtain and review the current Key Information Document (KID) and the Investor Disclosure Document for this Company. The Investor Disclosure Document, and Key Features / Terms & Conditions can be obtained free of charge from JPMorgan Asset Management (UK) Limited, and the Key Information Document can be obtained from JPMorgan Funds Limited or www.jpmmam.co.uk/investmenttrust.

DEFINITIONS

Overall Morningstar Rating™ assessment of a fund's past performance, based on both return and risk and shows how similar investments compare with their competitors. Investment decisions should not be based on a high rating alone.

Benchmark comparison Comparison of the Company's performance is made with the benchmark. The benchmark is a recognised index of stocks which should not be taken as wholly representative of the Company's investment universe. The Company's investment strategy does not follow or track this index and therefore there may be a degree of divergence between its performance and that of the Company.

Gearing Gearing represents the excess amount above shareholders' funds of total investments (excluding liquidity fund holdings) expressed as a percentage of the shareholders' funds. If the

amount calculated is negative, this is known as a "net cash" position.

Discount/Premium If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. If the share price of an

investment company is higher than the net asset value (NAV) per share, the company is said to be trading at a premium. The discount/premium is shown as a percentage of the NAV.

NAV The value of investment and cash, including current year revenue, less liabilities (prior charges

such as loans, debenture stock and preference shares at fair value).

Cash A company's net exposure to cash / cash equivalents (includes investment in liquidity funds and treasury stocks if held) expressed as a percentage of shareholders funds after any offset against its gearing.
